ABOUT US

UP & UP Elevators is a privately owned company, specialized in manufacturing, installation, modernization and maintenance of elevators. Designed and manufactured in Kerala, UP & UP Elevators is truly a Make in India product. We have technology partnership with Internationally leading motor and controller manufacturers, helping us deliver the best in class product. Our passion lies in knowing that our clients are satisfied and free of worries. We constantly challenge ourselves in improving and providing the best service and support to our clients.

OUR PRODUCTS RANGES FROM

- Passenger Elevators
- Bed Lifts
- Capsule / Panoramic Elevators
- Home Elevators
- Goods Lift

UP & UP
ELEVATORS

FEATURES OF UP & UP ELEVATORS

COMFORTABLE RIDE

UP & UP elevators are driven by the most advanced high quality energy efficient motors. The permanent magnet gearless machines ensures smooth acceleration and deceleration and excellent ride comfort. The renewed braking system ensures a comfortable, safe ride, good

MINIMIZED VIBRATION AND NOISE

Our centralized low friction hoisting technique as per the international standards reduces noise and vibrations thus improving the ride comfort and minimizing disturbance to areas near shaft.

ENGINEERING

High quality rigid elevator cabin reduces noise due to air friction inside the car and outside the shaft. New isolated guide shoe technology using low friction sliding cushions further help to reduce friction and noise from the rails.

CUSTOMER SATISFACTION

A service unique to UP & UP Elevators is ensuring comprehensive ride comfort testing as standard for all our lift installations. Your lift will not be handed over for use before it passes the test.

CUSTOMIZED DESIGN & OPTIMIZATION OF SPACE

Our Customized elevator manufacturing helps you to install elevator in non standard shaft ratios. The space optimized design reduces the space footprint of shaft and can provide maximum elevator cab size.

UP & UP
ELEVATORS

QUALITY

We have partnered with market leading certified companies for supplying components and equipments as per our specifications. Our elevators are guaranteed for increased product life, reduced down time, and maintenance cost.

UP & UP Elevators are designed in compliance with Indian Standards:

IS 15785 : 2007 | IS 15330 : 2003 | IS 15259 : 2002 | IS 14671 : 1999
IS 8151 : 1976 | IS 2365 : 2018 | IS 14665 : 2000 | IS 17106 (Part 1) : 2019

SAFETY

Auto Rescue Device: Providing Safe Elevators is always our prime focus, all our elevators are fitted with Auto Rescue device. So even in the event of a power failure, you will be taken safely to the next floor.

Mechanical door safety: The lift car does not move unless the doors are fully closed.

Safety Curtain: A screen of infra-red beams that acts as an invisible safety curtain. When an obstacle is detected, the entrance protection system immediately reopens the doors.

Outstanding levelling accuracy: The reduced stretch of the high quality steel wire ropes compared to conventional steel ropes, together with a closed-loop VF motion control, results in outstanding levelling accuracy (+/- 3mm).

Over speed governor: The brakes comes into action if the speed of the elevator exceeds the rated speed.

Over load sensors: Provides visual and audio warning, when the car is loaded than the rated capacity, elevator automatically closes doors and starts moving after the last person entered has stepped out.

Emergency call button: In case of any emergency ,the emergency call button inside the lift alerts.

Emergency lamps: In the event of a power failure, the emergency lamps lights the cabin.

Fire mans operation: Activating the fire man switch manually or by the BMS (building management system), the lift cancels all calls and moves towards the evacuation for use by the fire rescue team.

Intercom: Intercom provided inside the cabin and outside the lift for two way communication in case of any emergency.

SUSTAINABLE AND ECO FRIENDLY

Our elevators are designed with sustainability as the driving force. We stand in the forefront in developing solutions that benefit our environment as they do to the elevator users. Up & Up Elevators comes with the eco-friendly features to reduce the carbon footprint of the buildings.

DRIVE

- Gearless machine designed to save energy and avoid power loss
- Stable start uses energy more efficiently and reduces electric costs
- Frequency converter with standby power mode allows elevator to return safely to nearest floor in the event of a building power outage
- Compact, lightweight and durable design.

CONTROL

- Controls automatically switch car lights & fan to standby mode after 15 seconds to save energy
- Car panel and floor indicators all operate with low power, LED lights

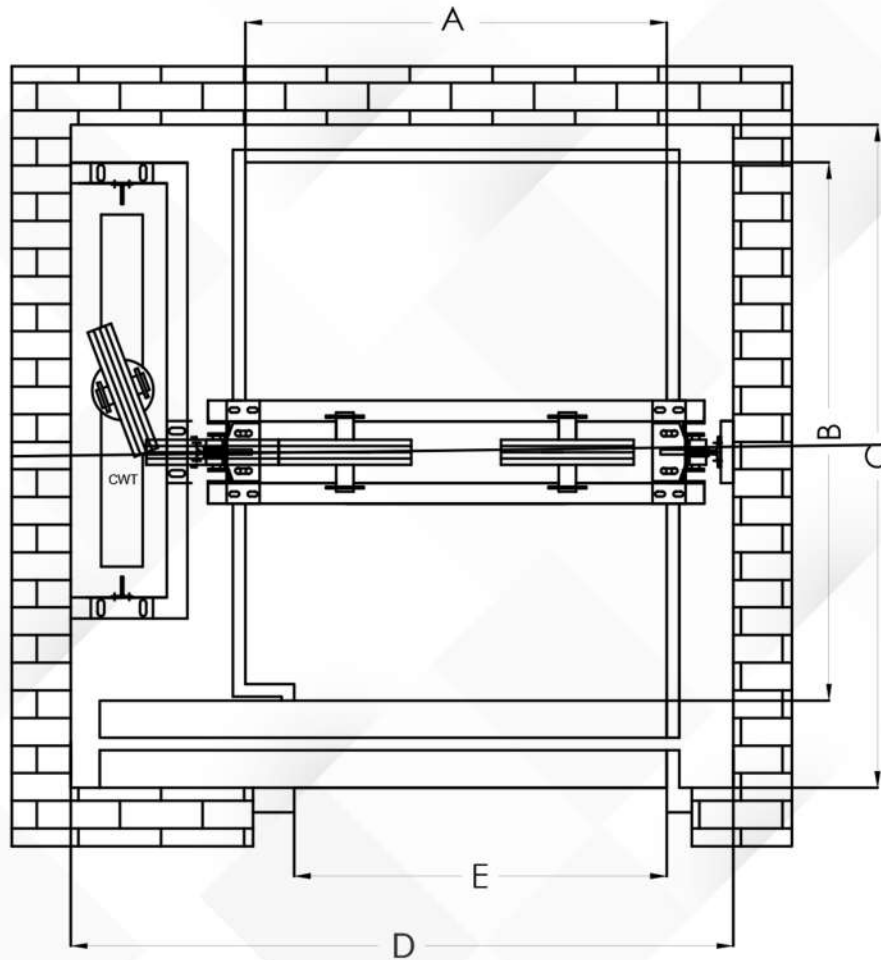

CAB AND HOISTWAY

- Car lighting equipped with energy-efficient LED lamps
- Good quality imported guide rails reduces friction and overall energy consumption
- Door drive with standby mode uses less electricity
- Overall design provides more usable space for enhanced passenger comfort.

The powerful and high-performance UP & UP freight or goods lift solution is ideal for a multitude of demanding vertical transportation tasks in a variety of buildings: supermarkets, shopping centres, airports, warehouses, hospitals, hotels, industrial plants and offices. These Industrial Elevators are Designed and Built to Carry out Heavy duty Lifting with Speedy Jerk Free Smooth travel and at the same time be Highly Energy Efficient. Thereby saving Critical Fragile Material from Damage, Reducing the travel time and Saving Energy.

MODERNIZATION

SAFETY COMPLIANCE

Over the period of time the elevator safety norms / rules have undergone changes. These new safety devices are mandatory for your own safety. Non-compliance of these safety norms increases the risk of accidents. UP & UP Modernization team can inspect your lift for the compliance of these safety norms and can incorporate the same in your elevator.

ELECTRICAL CHANGES

Most of the times major cause to go for modernization is the malfunctioning of elevators due to worn out electrical components and devices. So the best way to get rid of these current headache is to go for partial modernization of elevator by making electrical changes such as changing of control panel, wiring, cable, call button boxes, switches and other components. These changes not only help for better performance of elevators but also increase the life of elevator and reduces power consumption.

REPLACEMENT

If the elevator is very old and giving frequent problem and unsatisfactory performance, it is always advisable to go for complete replacement of elevator instead of spending repeatedly on repairs or partial modernizations. In complete replacement you may select any features or specifications of our new elevators that suits your requirements and budget. This helps in better performance, traffic handling as well as change in aesthetic looks. Our elevator modernization package maximizes the space available and can be adapted to practically any type of hoistway. If there is already an elevator, it allows the passenger capacity of the car to be increased without requiring construction work to make the existing hoistway bigger.

ANNUAL MAINTENANCE CONTRACT (AMC)

It is not only mandatory by Government lift department but also essential for your own safety and convenience, to have the AMC of your lift from qualified- licenced elevator contractors. Our trained and appropriately skilled personnel will regularly examine, lubricate and clean the machine, motor, controller, bearings, guides and if required make minor adjustments to ensure smooth and safe operation of elevator.

Apart from routine checkups emergency breakdown services also provided in AMCs

UP & UP
ELEVATORS

"In the modern world product monopoly is not possible, but we believe in service monopoly. Up & Up Elevators provides the best service and maintains long lasting relationship with our clients."
